NTT DATA INTRAMART CORP.

Yamato System Development Co., Ltd.

Multi-value Charge Service, Supporting 10 Types of Cashless Payment, Made Available for Payments from Companies to Individuals as Part of the "intra-mart Accel Kaiden!" Expensing System

Cashless expense reimbursement boosts convenience for employees

NTT DATA INTRAMART CORP. (Headquarters: Minato-ku, Tokyo; President: Yoshito Nakayama; hereinafter "INTRAMART") and Yamato System Development Co., Ltd. (Headquarters: Koto-ku, Tokyo; President: Nobuaki Kurimaru, President; hereinafter "Yamato System Development") have partnered to enable use of the Multi-value Charge Service^{*1} on the "intra-mart Accel Kaiden!"^{*2} application. As of May 2023, Yamato System Development's Multi-value Charge Service allows corporations using INTRAMART's "intra-mart Accel Kaiden!" expensing app to pay individuals using 10 cashless payment methods, selectable by the individual.

1. Background and Objectives

As telecommuting and other diverse work styles become more prevalent, an increasing number of companies are converting application processes to digital formats by introducing systems that allow employees to apply for reimbursement without having to come into the office. In addition, though electronic money and other cashless payment methods are becoming widespread for payments from individuals to companies, bank transfers have been the norm when companies reimburse expenses to individuals. Since many companies have limited dates for conducting bank transfers, there are needs to provide a system that streamlines expense reimbursement for both parties.

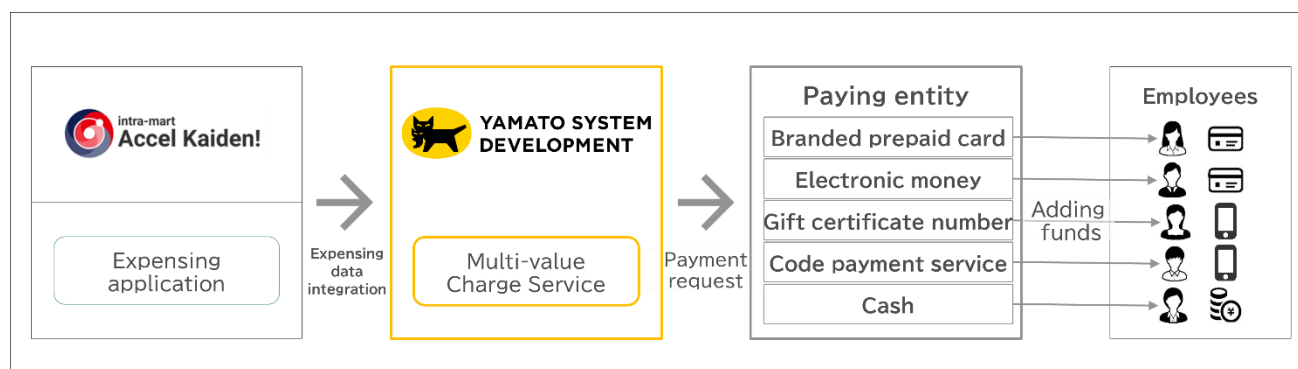

"intra-mart Accel Kaiden!" is an expense reimbursement application provided by INTRAMART, which has been No. 1 in Japan's domestic workflow market for 15 consecutive years^{*3}. This application is one of a suite of business applications that improve the efficiency of back-office operations related to expenses (including travel expenses), human resource administration, and work attendance.

Multi-value Charge Service was launched by Yamato System Development in 2019. It allows businesses to make payments to individuals using their preferred cashless method from a range of options, including electronic money. The system is currently in use among many corporate customers, with particular popularity in the reuse industry.

Now that the Multi-value Charge Service is available for "intra-mart Accel Kaiden!", it will reduce the time and effort required to withdraw funds from bank accounts, helping to boost convenience for employees.

2. Overview of the Multi-value Charge Service in "intra-mart Accel Kaiden!"

Companies can output CSV files for expense reimbursement data registered in "intra-mart Accel Kaiden!" and upload these to the Multi-value Charge Service. Employees to be reimbursed may then choose from 10 cashless payment methods, including electronic money and 2D barcode payment, in addition to cash.

*Users wishing to take advantage of these benefits must apply for "intra-mart Accel Kaiden!" and the Multi-value Charge Service separately.

3. Future Developments

Looking ahead, both companies will proactively work to enhance the functionality of their respective services toward further digitalization of business processes for expense reimbursement, thereby improving convenience for customers. In addition, the two companies have signed a new alliance partnership agreement and will support customers in their efforts to achieve digital transformation (DX) through joint seminars and events.
